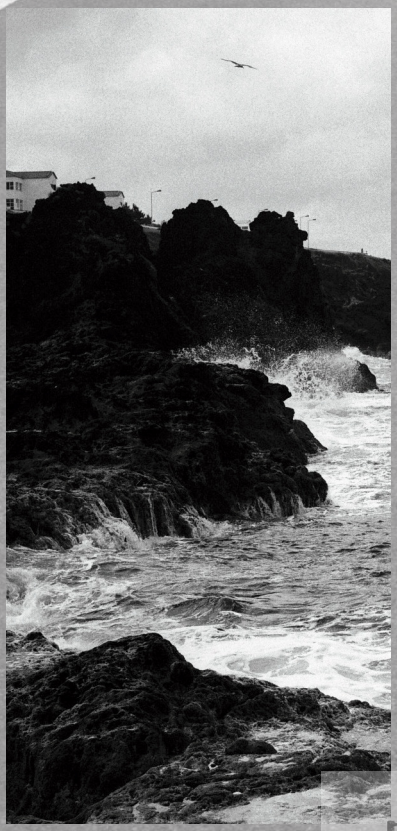
THE LANDSCAPE PHOTOGRAPHER COMPANION

Film Z is a panchromatic negative near infrared (up to 750nm) sensitive black & white film. Originally designed for aerial photography, Film Z is a very good choice for landscapes, offering good separation of green shades and its high contrast and red sensitivity is perfect when you want to shoot under bad light conditions.
You never know what the weather would be like when you go outhere...

HANDLING

The film is coated onto a polyester base and must be loaded and unloaded under subdued light to avoid lightleaks. Once the film loaded and the camera closed it is best to shoot three time for nothing to prevent lightleaks on your first pictures.



NO DX CODE, SORRY!

As Film Z is produced using recycled 135mm cartridges, there is no DX code available, please use manual ISO setting.
